

# Euro-Top FrontFix

Discover our unique  
quick-assembly cable gland!

## Euro-Top FrontFix

Material Polyamide 6  
brass, nickelplated

Sealing Chloroprene

Compression spring Chloroprene

Temperatures -20°C to +100°C  
short-term -30°C to +150°C

Protection class IP66/IP68

Note Quick-assembly cable gland  
for installation in metric  
through-holes

The **Euro-Top FrontFix** is a unique and to date one-of-a-kind cable gland concept, which eliminates the need for traditional connection technology using threaded fittings or lock nuts. A special locking mechanism simplifies assembly considerably and means that time savings of approx. 70 percent can be achieved realistically compared with commercially available threaded cable glands. Also available with double seal for extended clamping range.

### Applications:

- Automation
- Electrical engineering
- Solar and wind power
- Machinery and plant engineering
- Enclosure technology and switch cabinet construction

### Advantages:

- A special spring element stabilises the cable gland directly after it is engaged in the through-hole and reliably prevents the cable gland from twisting during assembly. This is a crucial advantage especially in case of applications in confined spaces that are difficult to access.

- One-handed front mounting can be completed easily in under six seconds without the need for special tools.
- **Euro-Top FrontFix** can be used flexibly with enclosure wall thicknesses of between 0.5 mm and 4.0 mm.
- Requirements for commercially available cable glands are fulfilled fully. This essentially relates to strain relief and the protection class (IP66, IP68).
- **Euro-Top FrontFix** can be disassembled without difficulty and therefore also re-used repeatedly.
- Costs for complicated and time-consuming threaded holes or lock nuts do not arise.
- Cap nuts and connecting pieces each have clockwise threads. This offers an advantage over similar solutions, which generally have a counter-clockwise thread on the connecting piece and a clockwise thread on the cap nut.
- Cap nuts and connecting pieces have identical width across flats.
- Approval has been granted under the new EN 62444 (VDE 0619) standard and the incorporated impact test was also passed without difficulty.

## Product inquiry

Would you like to receive further information, samples or a quote from us? Please send us the completed form by fax to » +49 5407 8766-99 or complete the form online at » [www.frontfix.info](http://www.frontfix.info).
